

THE KUTTMATSVINN CERTIFICATE

DRYTECH

The company works in a targeted and concrete manner to reduce food waste both within its own operations and in collaboration with other actors in the value chain.

This KuttMatsvinn Certificate has been awarded to DRYTECH for joining the Industry Agreement on the Reduction of Food Waste. The company has reported food waste data and implemented measures for at least one year. The company participates voluntarily and supports Matvett's royalty scheme* as an important source of funding for food waste efforts in the industry.

Elements that strengthen the industry's and the company's food waste efforts:

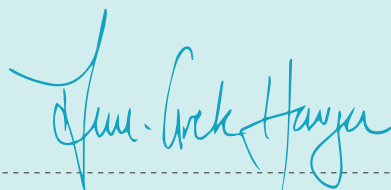

The Industry Agreement is a long-term agreement with the goal of halving food waste by 2030. The purpose of the agreement is to ensure that companies follow up on the targets in the agreement by implementing systematic efforts to prevent and reduce food waste within their own operations and throughout other stages of the value chain, including at the consumer level. Increased collaboration between actors in the food industry is necessary to develop new solutions for reduced food waste together.

Through joining the Industry Agreement, DRYTECH actively works on the following measures:

- Measure and report the amount of food waste and implemented measures annually to NORSUS
- Map and evaluate the causes of food waste and define reduction targets
- Ensure good organisation and training of employees in measuring and implementing waste reduction measures. Appointing a food waste coordinator is encouraged.
- Identify and implement their own measures and plans internally and across the various stages of the value chain that together will contribute to meeting the reduction targets
- Have an agreement with a Food Bank or non-profit organisation for the donation of surplus food
- Identify and implement targeted measures to raise awareness and contribute to reduced food waste among consumers
- Make resources available to participate in various industry projects and gatherings with the aim of reducing food waste in the value chain
- Participate actively in Matvett's digital campaigns and make their own food waste initiatives visible where relevant
- Knowledge and experience sharing within the industry
- Familiarise themselves with the "10 Principles for Increased Collaboration"

On the basis of the above, DRYTECH has the necessary foundations to work in a targeted and concrete manner to reduce food waste both within its own operations and in collaboration with other actors in the value chain, including consumers.

Oslo, 4/6 2026

Anne-Grete Haugen,
CEO, Matvett AS
